Organic, rustic, with a touch of elegance. Products from this line will be perfect for brands close to nature, caring for the environment, valuing simplicity and minimalism.

3

Elegant, subdued, special. Dark, deep colours with delicate spring themes are the perfect choice for premium brands.

Illustrations, which became the core of our Easter graphic portfolio, were created by Pola Augustynowicz.

Closer to the nature

Every day we pay attention to the freshness of food products purchased in stores. At SLODKIE, we believe that the same rule applies to advertising sweets. That is why we do everything to offer impeccable freshness of the products that reach our customers with each order.

How do we do it?

All of our chocolate is produced in cooperation with Barry Callebaut Finest Belgian Chocolate, thanks to which our products are characterised not only by an excellent taste and composition, but also by its high quality.

Our caramel is a fully craft production! It is handmade without the addition of artificial flavours, colours or preservatives.

To ensure freshness, we pour out chocolate and cook the caramel only after an order has been placed.

We are constantly working to ensure our products are pure and their ingredient lists clean and short and their compositions are shorter and shorter. As a result, we can offer certified vegan products, without dairy, gluten or artificial preservatives.

These methods guarantee a fresh product with the longest possible shelf life.

We prepare and print all of our packaging in house, thanks to which we offer a fast and efficient delivery process.

We package our products in personalised packaging immediately after their production.

The entire process from design to shipment takes place under one roof, therefore we have everything under strict control. We meet the highest standards of food production safety, confirmed by the international IFS Food certificate.

Crafted in Belgium
FROM BEAN TO BAR
since 1911.

CALLEBAUT®
BELGIUM 1911

Our cocoa beans come from sustainable and recognised sources – directly from the farmers under the care of the Cocoa Horizons Foundation.

The beans ferment for 3 to 8 days between the banana leaves, changing their flavour from bitter to chocolate.

In the next 2 to 4 days, they are dried in the sun.

Our beans come only from the main harvest – they're bigger and with a stronger flavour. Before shipment, they go under another quality check.

The beans transported from Ghana, Ecuador and the Ivory Coast go to Antwerp where the flavour of each batch is determined.

Thanks to this selection of flavour profiles, Master Blenders manually compose the beans for the perfect flavour.

It is only this smooth and creamy chocolate that is tempered by us into individual shapes with our clients logo.

This mixture is passed through a 5-roll refiner and then it is carefully subjected to a process of conching which takes a minimum of 60 hours.

Depending on the recipe, the cocoa liquor is combined with high quality ingredients, such as vanilla, milk or sugar.

Then the beans are split open, and the cocoa nibs are ground to a smooth cocoa liquor – the heart and soul of our chocolates.

Whole beans are roasted! The shell protects them and keeps the aromas and flavours preserved inside.

MOLDINGS

We are constantly working on the maximum reduction of plastic consumption in our packaging. Where it is necessary due to the safety of a food product, we use one that is 80% recycled and 100% recyclable for reuse. Our product moldings are made of R-PET foil.

What does it mean?

PET (polyethylene terephthalate) is currently one of the most commonly used packaging materials because it protects the product's properties as well as being lightweight, durable and transparent. Such packaging allows to maintain the high quality and properties of the stored product. PET packaging is made of the so-called primary raw material, i.e. obtained directly from crude oil fractions in an appropriate chemical process. One of the characteristics of PET is that it can be easily recycled, and because of the ease of processing and

recovery, PET transformed is a valuable raw material. They can be easily transformed into bottles, t-shirts, sleeping bags and carpets or other articles.

R-PET, or recycled PET, is a popular, high-quality plastic suitable for contact with food, commonly used for the production of bottles and packaging. Importantly, after processing, it does not lose the properties of PET. It is safe, functional and helps to significantly reduce the production of new objects.

Why is the use of R-PET plastic beneficial for the natural environment?

- limits the production of new material,
- reduces CO₂ emissions from 40 to 80%,
- recycling reduces water consumption in the production process (approx. 90%) and energy (approx. 80%),
- R-PET is a step towards a closed circular economy,
- the material is suitable for continuous recovery – materials and raw materials can remain in economic circulation as long as possible R-PET has a lower carbon footprint.

The effect of using R-PET packaging is also a significant reduction in greenhouse gas emissions!

Caramel – a masterful composition of excellent ingredients, such as caramelised sugar and caramelised milk with an exciting pinch of salt. In its intense but balanced taste you will find rich notes of butter and cream.

Wholefruit – the latest type in our offer. Wholefruit chocolate is made entirely from pure cocoa fruit without vanilla, lecithin and refined sugar. The whole fruit is used for its production, which gives it its unique aroma. The healthiest and most organic chocolate you can imagine! This is its debut on the European advertising sweets market

Sugarfree – is a perfect flavour composition combining cocoa, milk and sweetness – but without added sugar. Its wonderfully harmonious taste and pleasant sweetness were obtained thanks to the use of maltitol, complemented by natural Bourbon vanilla. IN OUR OFFER YOU WILL FIND THREE TYPES OF PAPER TO CHOOSE FROM!

The packaging of promotional sweets is pivotal. It transcends being a mere box, it's **your canvas for advertising**, an avenue to shine. Crafted from **FSC-certified paper**, our packaging showcases our commitment to the environment. Tailor your packaging to suit your brand, campaign, or the values you wish to express by selecting from three paper types available.

kraft paper

Paper crafted entirely from recycled or mixed secondary fibers (previously used paper materials). Kraft paper, distinguished by its natural hue, doesn't undergo a bleaching process; its shade is affected by the recycled content. Due to its unique color, the CMYK and PANTONE color palettes might display varied saturation compared to white paper.

white paper

White paper consists solely of primary fibers, derived as a by-product from fresh wood fibers acquired through processes like sawmilling or controlled tree harvesting. Its color is achieved through a chlorine-free bleaching process. It's recyclable and supports up to 25 recycling cycles. This paper allows for excellent reproduction of the PANTONE and CMYK color palettes.

ecru paper

Modern paper enriched with grass fibers, incorporating up to 40% ecological grass fibers alongside other virgin fibers. Utilizing grass in paper production conserves water, curtails energy consumption, and minimizes the requirement for substantial chemical use, consequently slashing CO₂ emissions by about 75%. This environmentally-conscious paper is fully biodegradable. Its versatile properties enable the realization of innovative and unconventional projects while highlighting eco-friendly aspects.

COMPOSTABLE FOILS

Due to the strict rules regarding the safety of food products, foil is an indispensable material that we use at SLODKIE. To minimize the consumption of plastic, we were the first on the Polish market of advertising products to introduce a 100% compostable foil.

In addition, we also offer our sweets in packaging in which we have reduced the use of foil by as much as 65%. How is this possible?

The specialised packaging foils we use, provide strong ecological support for the growing consumer demand for more environmentally friendly packaging. Most types of BIO foil are based in over 90% on renewable resources, i.e. wood pulp, and have certificates of compliance with European and American standards for packaging suitable for industrial composting. What besides wood pulp?

The foils offer a good barrier for gases, and the coatings can be customized to provide different degrees of barrier for moisture, depending on the needs of the packaged product.

The ideal end-use scenario for BIO foil? Industrial or home composting! You can order your desired products in BIO foil and make sure your sweet gesture will please both your recipients and our planet!

- wood pulp from which BIO foil is produced comes from FSC-certified sources,
- compostable in a home composter,
- complete security of your advertising product.

Use BIO foil when placing your order and take care of our planet with us!

BOTANIC GARDEN COLLECTION

Botanic Garden is a collection that perfectly combines beauty with nature. We combined clean labels and short compositions of candies with real flower petals: rose, lavender and elderberry flowers.

Thanks to them, we have obtained delicious flavor compositions that cannot be found anywhere else on the advertising sweets market!

The floral nature of the products in this line is also evidenced by the packaging. We have created them from raw materials that can be recycled or reused in accordance with the zero waste philosophy. Visually, we showed the floral motif in an entirely new version – more subdued and elegant.

Packaging

At SLODKIE, we pay a lot of attention to the ecological packaging of our advertising gadgets. Our transport packaging is 100% recycled! Did you know that when ordering our sweet products, you will receive them secured with fully biodegradable fillers? But that's not all! We also use eco-type foil, which is 100% recycled and fully recyclable. We replace classic adhesive tapes with paper ones, and our technologists are constantly working on reducing the use of plastic in our packaging as much as possible.

Waste management

At SLODKIE we put great attention to the segregation of waste. Marking baskets with appropriate icons and the use of colored bags additionally make it easier for proper segregation of garbage.

What do we do to reduce production waste?

We recycle some of our raw materials or semi-finished products! We also limit originating residues from the plastics we use, and we cooperate with external companies that recycle unused packaging. In 2022, we also established cooperation with Too Good To Go. It is a company that helps save food (among other things!) and has a lot of advantages: it not only fights against food waste, but also allows you to buy high-quality products for a much lower price. You can now collect sweet surprise packages from our Warsaw headquarters, containing e.g. high-quality lollipops, candies and craft chocolates.

Transport and logistics

In 2022, we exchanged the SLODKIE company car for an even greener version! Our new car is an electric Opel with zero CO₂ emissions.

This change makes us proud – logistics and transport are an important part of our daily work. Therefore, we have been cooperating exclusively with green delivery partners, which helps reduce gas emissions. Thanks to this, our products will reach you swiftly and not only on time, but also in an environmentally neutral way.

TEA SHOP COLLECTION
